

How to trap a giant

Are you scared to sleep at night because of the giant? If you are scared help is at hand. If you see a giant at night do not go outside because giants are deadly and dangerous. Read these instructions 1...2...3. Soon your giant will be gone.

What you need:

A spade and a fork

A brick

A sack

Sticks

A toy child

What you do:

First, dig a very deep, deep, deep hole.

Next, cover the hole with the sack. Put the sticks and leaves on top to make it camouflaged.

Now, put the toy child on the pit carefully so the trap doesn't collapse.

The final comment:

Do not give the giant any food apart from disgusting snozzcumpers because that is what he deserves.
